

## Create and Configure Node-Red service

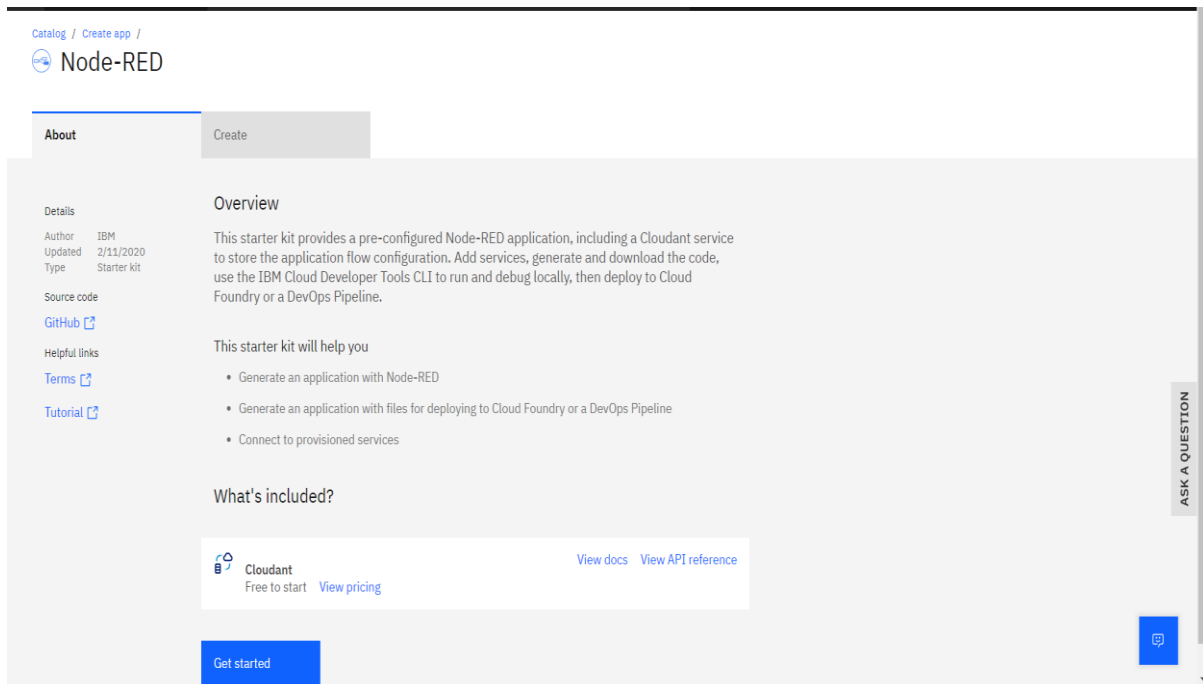

Date	05 November 2022
Team ID	PNT2022TMID33708
Project Name	SMART SOLUTIONS FOR RAILWAYS

### CREATING NODE-RED IN IBM CLOUD

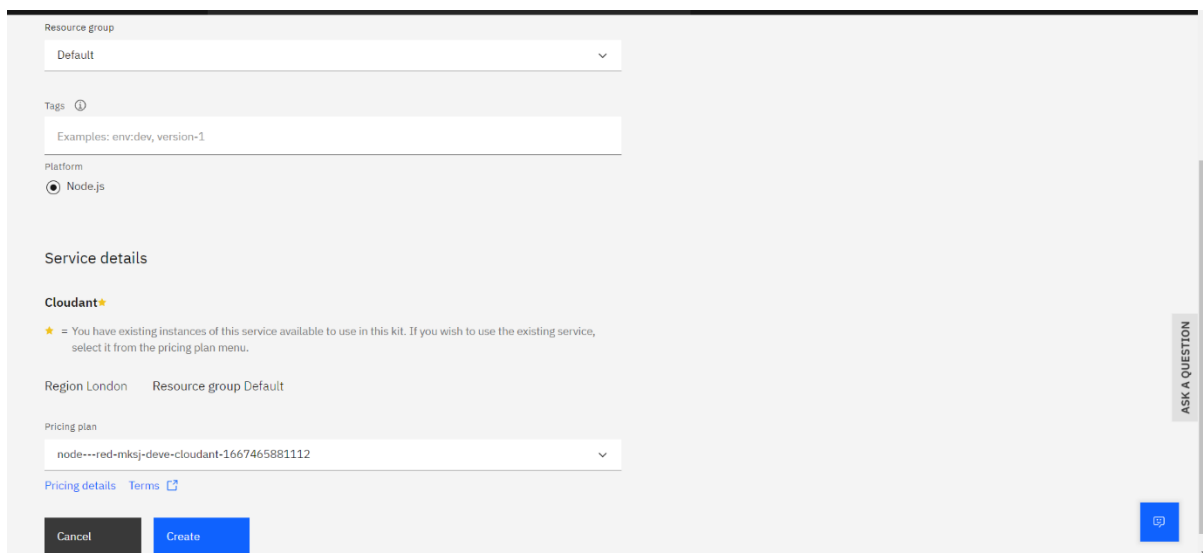

#### STEP 1: Open ibm cloud:

#### STEP 2: Go to catalog and search for node red app and open it:

**STEP 3:** Enter the app name, location and select the plan and click on create.:

**STEP 4:** click on deploy your app button:

Resource list / App details /

### Deployment Automation

[Configure Continuous Delivery](#)

Continuous Delivery is not enabled for this app. Enable Continuous Delivery to automate builds, tests, and deployments through Delivery Pipeline, GitLab, and more.

[Deploy your app](#)

### Getting started quickly

**Configuring your app**

To connect services and DevOps toolchains to your app:

1. Use the **Services** card to connect a service to your app. Select an existing service instance, or create a new one. [Learn more.](#)
2. If you want to view the code before your app is deployed, click **Download code** to obtain the .zip file.
3. Click **Deploy your app** in the **Deployment Automation** card to select the deployment target and configure the Continuous Delivery service. The deployment begins automatically.
4. After the deployment begins, you can view the status of the deployment, modify your app, view your repo, or view the app's URL.
5. If you make any changes to your app, be

**STEP 5:** In deployment automation select cloud foundry and click on create.org:

## Node RED NGHKJ 2022-11-04

[Select the deployment target](#) [Configure the DevOps toolchain](#)

### Deployment Automation

Select your deployment target and configure your DevOps toolchain. After you click **Create**, the toolchain is created, and the deployment process is started automatically.

Deployment target

**Kubernetes Service**  
IBM

Deploy, scale, and manage your containerized application workloads to highly available clusters.

**Red Hat OpenShift**  
IBM

Deploy your apps on highly available clusters that come installed with Red Hat OpenShift on IBM Cloud.

**Cloud Foundry**  
IBM

Deploy and run your applications without managing servers or clusters. A Lite plan is available for quick and easy deployment.

**Code Engine**  
IBM

Run your app, job, or container on a managed serverless platform. Auto-scale workloads, and pay only for the resources that you consume.

IBM Cloud API key

### Getting started with apps

**Step 1. Select the deployment target**

Select your deployment target, and then provide the configuration information.

**IBM Cloud Foundry**

Cloud Foundry is the premier industry standard Platform-as-a-Service (PaaS) that ensures fast, easy, and reliable deployment of cloud-native apps. Cloud Foundry ensures that the build and deploy aspects of coding remain carefully coordinated with any attached services — resulting in quick, consistent and reliable iterating of applications. Cloud Foundry has a Lite plan that allows quick deployments for testing purposes.

**Before you begin**

- If your account doesn't have a Cloud Foundry org, you must create one. [Create org.](#)

**Steps**

1. Select the number of instances, memory allocation, **region, org,** and **space.**

**STEP 6:** click on create button and enter the name and create a space:

Account

Account resources

Resource groups

Cloud Foundry orgs

Licenses and entitlements

Tags

Dashboards

Account settings

IBM Cloud Shell settings

Notification distribution list

Classic Infrastructure

Subscriptions

Audit log

Company information

## Cloud Foundry Orgs

IBM Cloud Foundry Public is being deprecated. Please see [full details](#).

ASK A QUESTION

**STEP 11 :** You will redirected to your node-red on ibm cloud page:

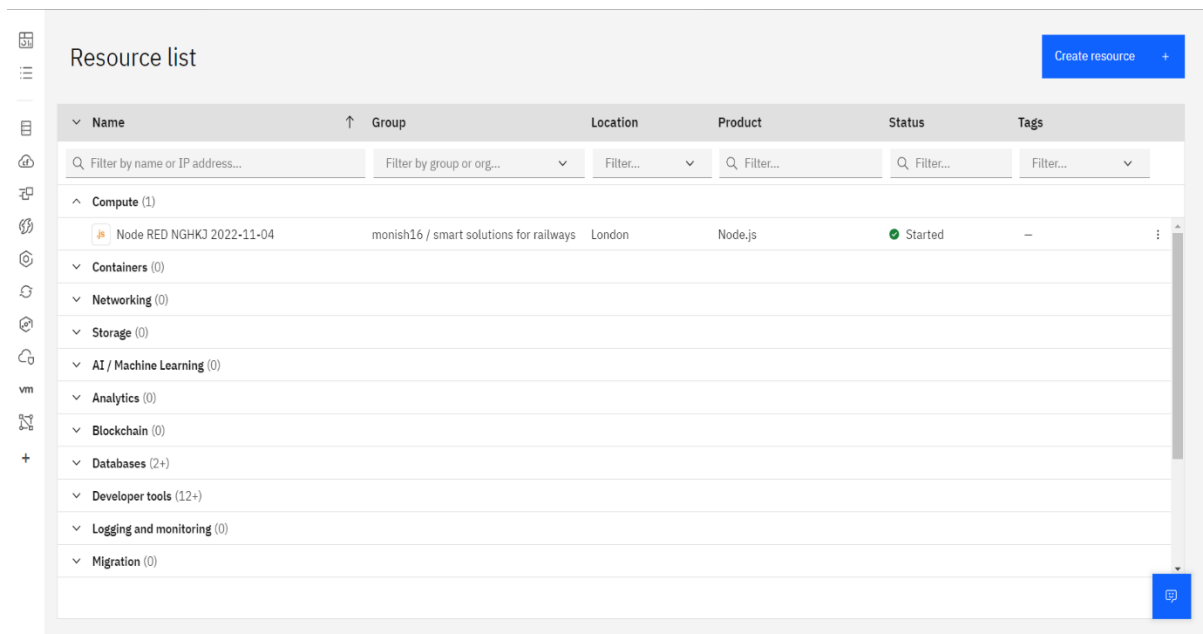

**STEP 12:** Click on node-red flow editor and you will be redirected to your node-red workspace:

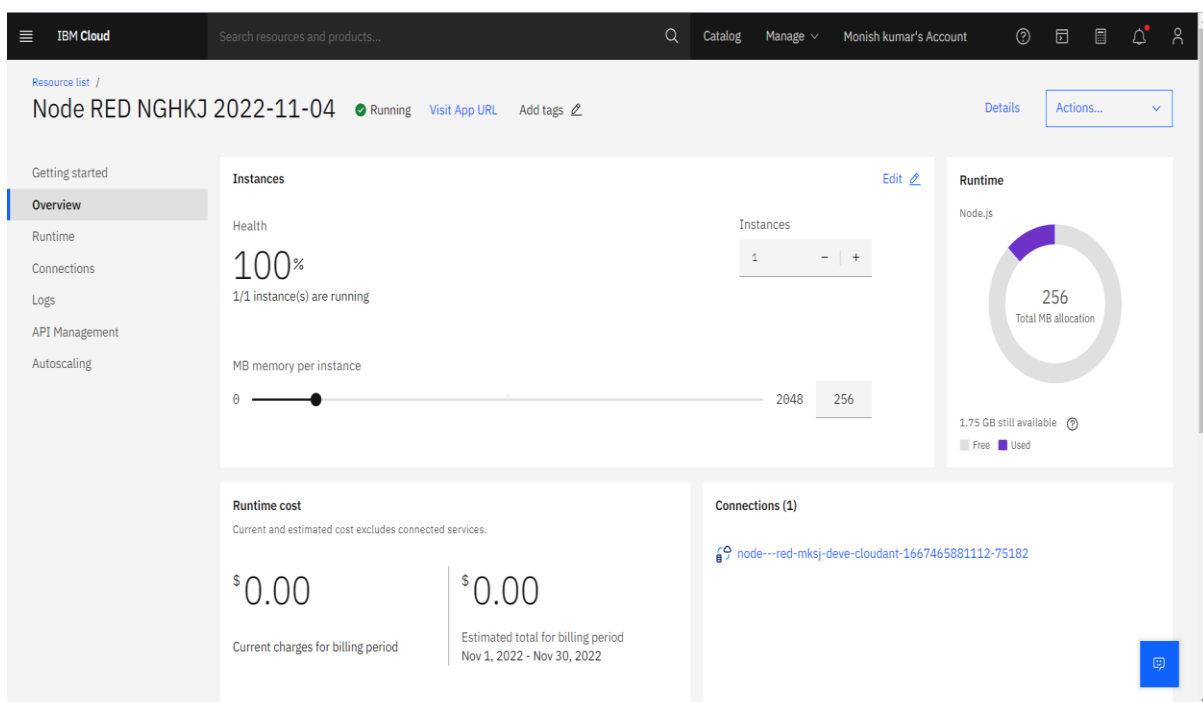

**DIRECTING TO CREATED NODE-RED WORKSPACE**

**STEP 13:** In resource select compute and click on node-red :

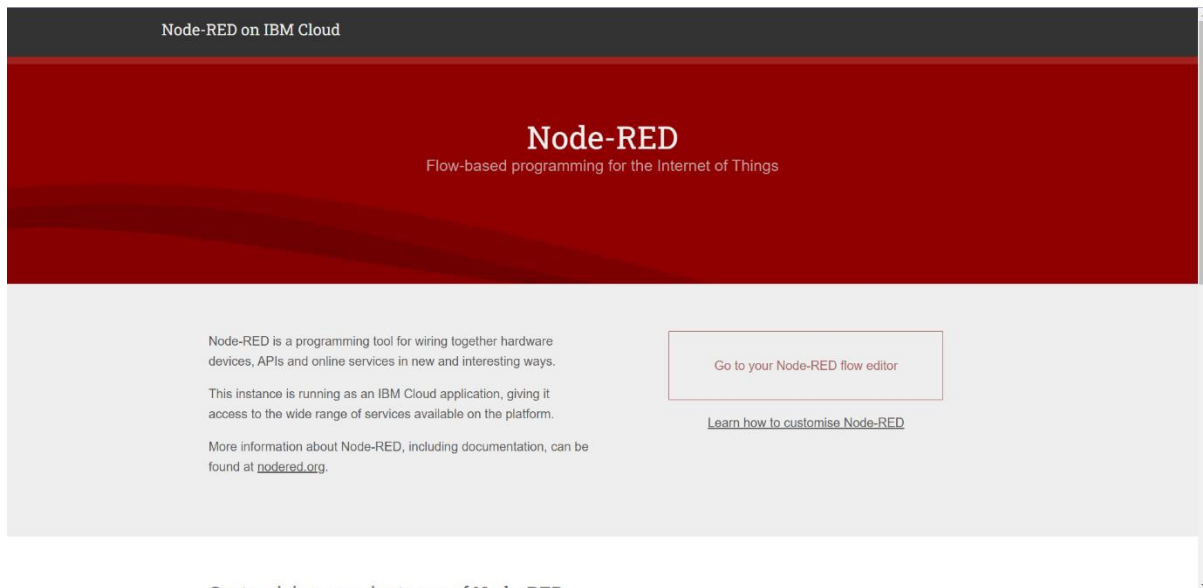

**STEP 14:** click on visit app url to be redirected to node red:

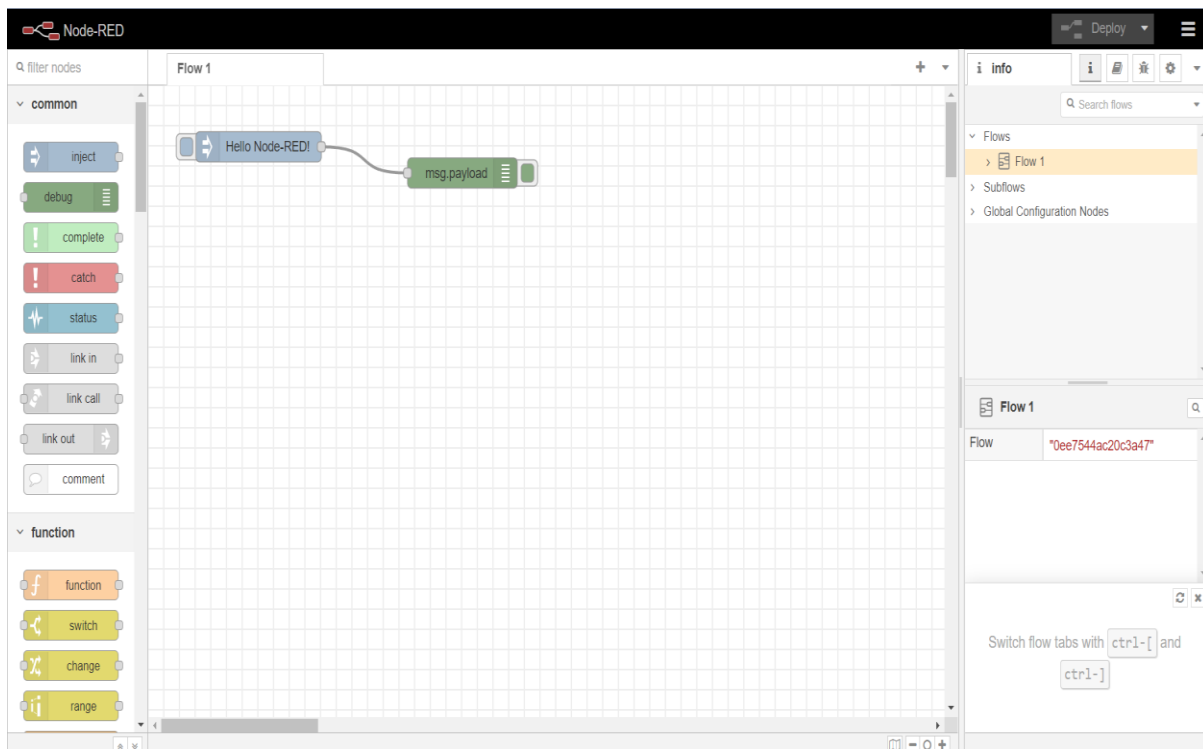

**STEP 15:** Click on go to your NODE-RED flow editor button:

**STEP 16:** You will be redirected to the node red flow editor:

**STEP 17:** Generating API key and Authentication token:

**IBM Watson IoT Platform**

monishkumarts@student.aufmd.edu.in  
ID: jqr6mg

**The API key has been added.**

Authentication tokens are non-recoverable. If you misplace this token, you will need to re-register the API key to generate a new authentication token.

Generated Details		API Key Information	
API Key	a-jqr6mg-hqigptkico	Description	-
Authentication Token	ann9MQLM_i_uXnoItY	Role	Standard Application
		Expires	Never

Make a note of the generated authentication token. Lost authentication tokens cannot be recovered. If you lose the token, you must reregister the API to generate a new token.

View API Key Add Another Close

### Browse API Keys

This table shows a summary of the API keys that have been added for the organization. It can be filtered, organized, and search on using different criteria. To get started, you can add API keys by clicking Generate API Key.

Type the app description to search for

1 Simulation running

## STEP 18: Edit Ibmmiot in node:

**Node-RED**

Flow 1

**Edit ibmiot in node**

Delete Cancel Done

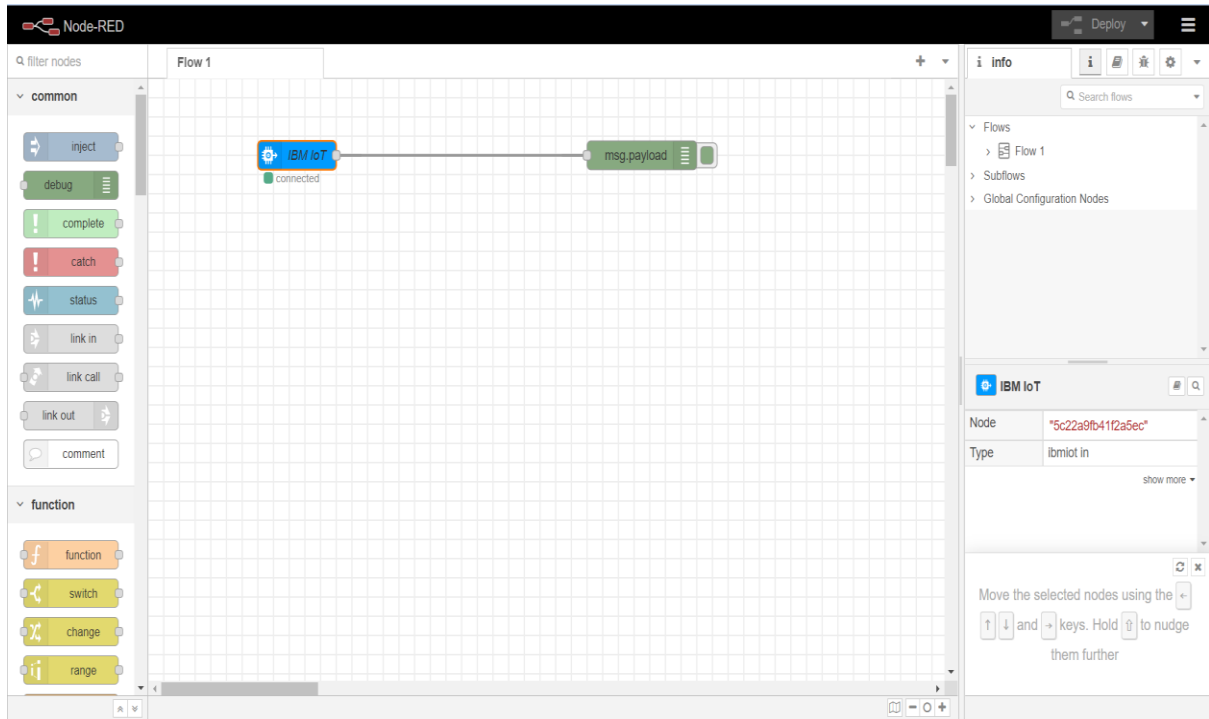

**Properties**

- Authentication: API Key
- API Key: e19c2b2383d75b20
- Input Type: Device Event
- Device Type: All or b11m3edevicetype
- Device Id: All or MKSJ16
- Event: All or +
- Format: All or json
- QoS: 0
- Name: IBM IoT
- Service: registered

Use the Input Type property to configure this node to receive Events sent by IoT Devices, Commands sent to IoT Devices, Status Messages referring to IoT Devices, or Status Messages referring to

Enabled

## STEP 19: Connect Ibmmiot in and debug 1 and deploy:

**STEP 20:** Edit gauge node (the gauge nodes named as latitude,longitude and available\_seats as fig1,fig2,fig3):

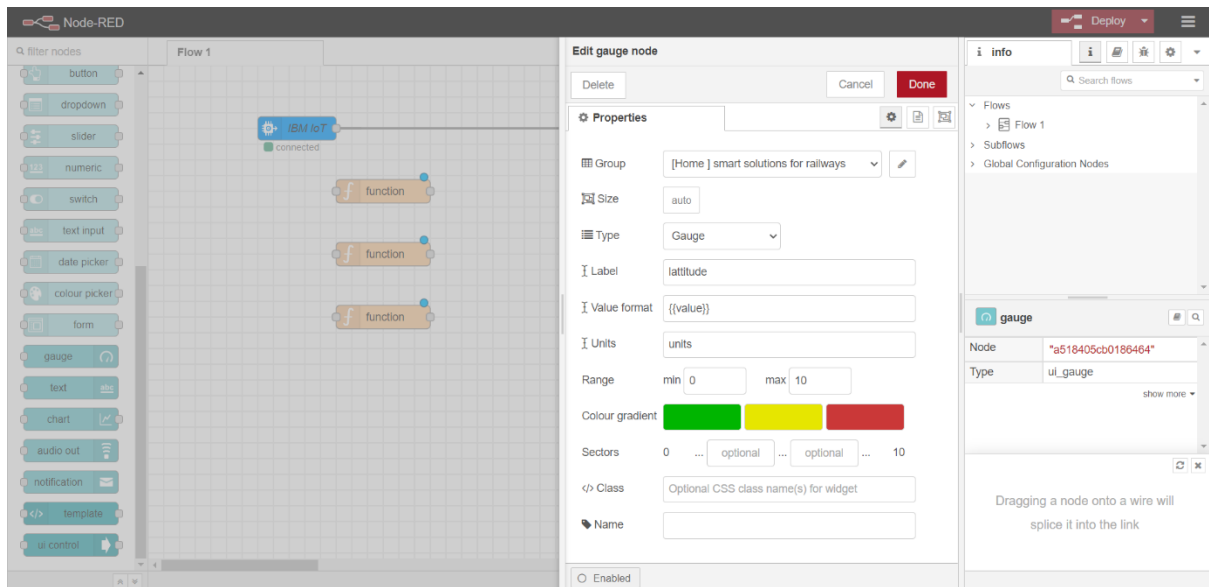

FIG 1

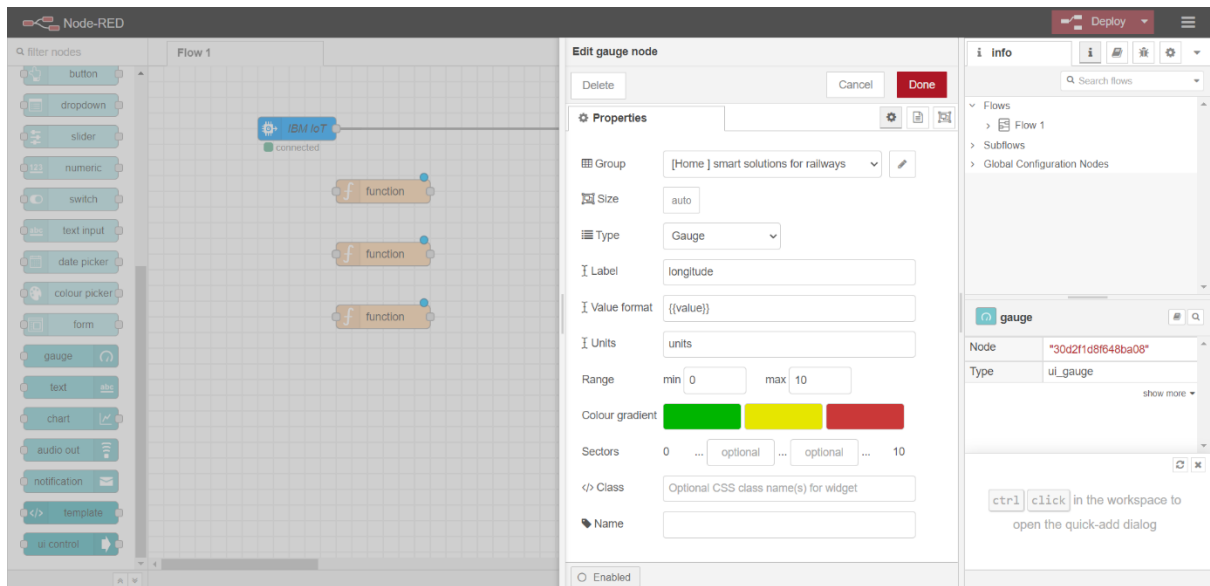

FIG 2

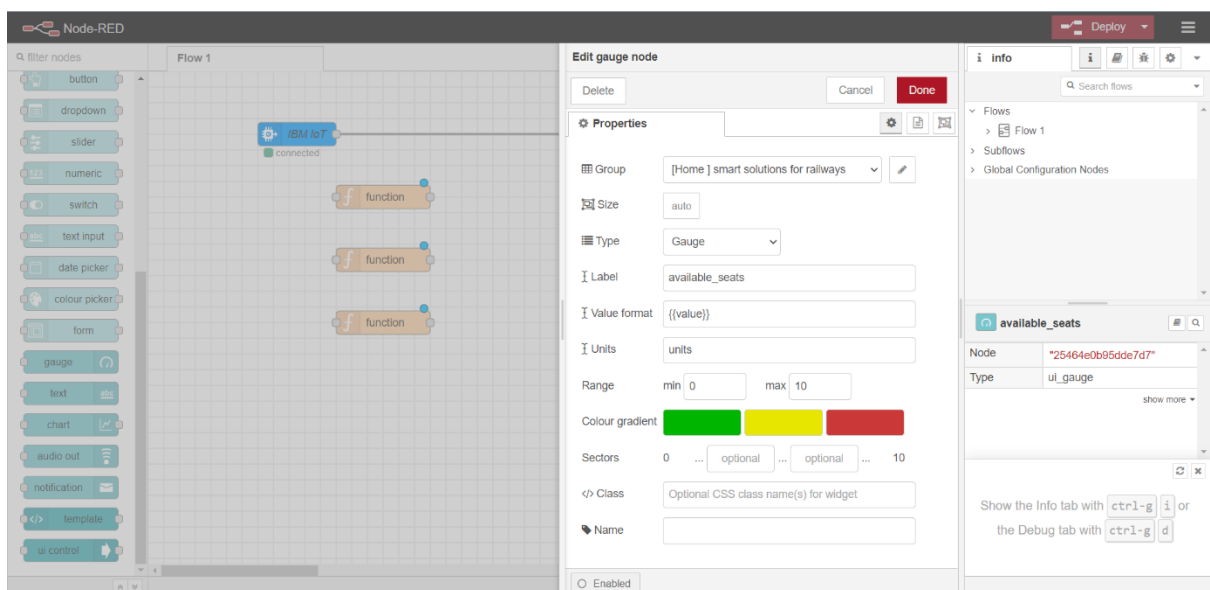

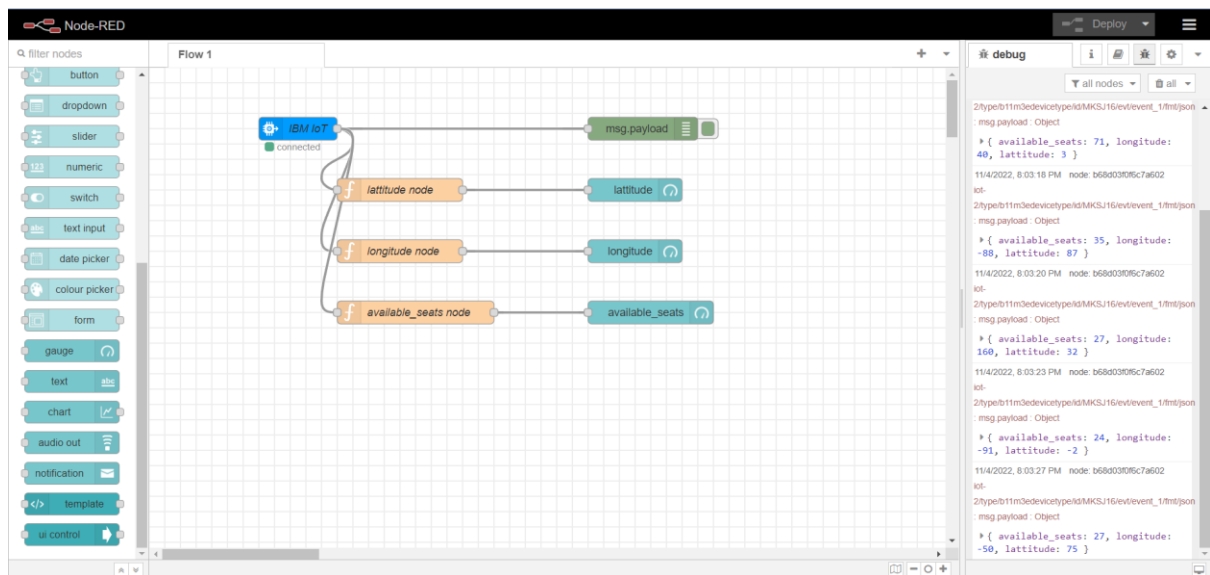

FIG 3

**STEP 21:** Generate debug message from IBM Watson IoT Platform and connect the nodes:

The screenshot displays the IBM Watson IoT Platform interface. The main panel shows a list of recent events for a device of type 'b11m3edevicetype'. The events are listed in a table with columns for Event, Value, Format, and Last Received. A modal window is open for creating a new event type, showing the event name 'event\_1', a schedule of '20 Every Minute', and a payload template.

Event	Value	Format	Last Received
event_1	{"available_seats":61,"longitude":-10,"latitude":...	json	a few seconds ago
event_1	{"available_seats":57,"longitude":108,"latitude":...	json	a few seconds ago
event_1	{"available_seats":81,"longitude":117,"latitude":...	json	a few seconds ago
event_1	{"available_seats":39,"longitude":81,"latitude":-...	json	a few seconds ago
event_1	{"available_seats":10,"longitude":-30,"latitude":...	json	a few seconds ago

Items per page: 50 | 1-1 of 1 item

**Device Type: b11m3edevicetype**

**Events 1** [New event type]

Event type name: event\_1 [Send]

Schedule: 20 Every Minute

Payload: Specify the event payload in the editor window or by uploading a CSV file.

```
0 {
1   "available_seats": random(0, 100)
2   "longitude": random(-180, 180)
3   "latitude": random(-90, 90)
4 }
5
```

[Upload a CSV file] [Cancel] [Save]
